\*All sediment and erosion control measures must be visually inspected and the appropriate maintenance and repair actions taken whenever precipitation exceeds 1/2 inch in any 24 hour period.

**SEDIMENTATION CONTROL NOTES**

The project has been designed to control erosion and prevent damage to other property. All stripping, earthwork, grading shall be performed to minimize erosion. Natural vegetation shall be retained wherever possible. The proposed plan will allow almost all eroded materials to be retained on site.

All areas disturbed by the construction of the roadways, ditches and sedimentation basins shall be seeded. Payment will be by the number of square yards disturbed as per the grading plan.

**METHOD**

Straw bales are to be utilized to create temporary dams to catch the silt. These are to be installed at points where the flow is concentrated. Surface water is to be directed into these temporary silt basins by means of temporary swales and ditches. As the installation of the storm sewer progress, straw bales are to be placed at the inlet and outlet of sewers to control the silt. Payment for the above shall be included in items Excavation, Embankment.
